Další těžba hnědouhelného ložiska Turów bude probíhat na plochách již odňatých pro důlní dílo a vnitřní haldy a v části ložiska doloženého jižně a jihovýchodně od hranic současné dobývky. Těžební hranice byly navrženy podél bilančních hranic ložiska s přihlédnutím k průběhu koryta potoka Biedrzychówka, silnice Sieniawka – Opolno-Zdrój a státní hranice s Českou republikou. V navrhovaném cílovém dosahu důlního díla se nachází sídla Opolno-Zdrój a Białopole. Těžba uhlí bude probíhat do objemu 11 500 000 tun ročně v letech 2020–2038 a 7 000 000 tun ročně v letech 2039–2044. Těžba hnědouhelného ložiska bude probíhat do výškové kóty 30 m pod úrovní moře.

Těžba ložiska Turów si vyžádá, stejně jako je tomu nyní, zajištění nepřetržitého odčerpávání vody. Vnějšími recipienty vody čerpané z dolu jsou Lužická Nisa, příkop R-1 a potok Biedrzychówka – pravobřežní přítok Lužické Nisy a potok Ślad (Jaśnica) – levobřežní přítok Miedzianky.
